

Disability Among Mississippi Adults in 2020

The Mississippi Behavioral Risk Factor Surveillance System (BRFSS) is conducted annually to monitor the prevalence of behaviors that contribute to the leading causes of morbidity and mortality among adults in our state. The 2020 Mississippi BRFSS was completed by 6,479 Mississippians aged 18 years or older.

About Disability

- Among adults in the United States, the age-adjusted prevalence of having **any disability** was **24.8%** in 2020.¹
- The most commonly reported disabilities among adults in the U.S. are **mobility** (11.1%) and **cognitive** disabilities (10.9%).¹
- Individuals with a disability have a **higher rate of not being able to see a doctor** in the past 12 months due to cost (21.6%) compared to adults without disability (8.2%).¹

Disability in Mississippi in 2020

- Approximately 1 in 3 adults (**34.5%**) had a disability.² (Figure 1)
- The percentage of having a disability was **higher** among **female respondents** (36.1%) compared to male respondents (32.7%), though the difference was not statistically significant.² (Figure 2)
- The percentage of having a disability was **higher** among **White** respondents (35.6%) compared to Black (33.0%) and Other race (32.7%) respondents, although the difference was not statistically significant.² (Figure 3)
- The percentage of having a disability was **highest** among **White females** (37.5%) and **Other race males** (36.0%*); however, there were no statistically significant differences among the race/gender groups.² (Figure 4)

Definitions

- A respondent is considered to have a **disability** if they answered “yes” to any of six (6) questions related to hearing, vision, cognition, mobility, self-care, and independent living.^{2,3}
- In this report, “**Other Race**” refers to adults who reported their race/ethnicity as anything other than White or Black Non-Hispanic or any race and Hispanic.
- The difference between two estimates is considered **statistically significant** (also stated as “significantly higher/lower” or “significant” in this fact sheet) if the 95% confidence intervals do not overlap.

Disability Among Mississippi Adults in 2020

Disability in Mississippi in 2020 (continued)

- The percentage of having a disability increased with age and was significantly **higher** among respondents **aged 65 years and older** (53.4%) compared to respondents in all younger age groups.² (Figure 5)
- The percentage of having a disability increased as education level decreased. Disability was significantly **higher** among adults who have **not completed a high school education** (54.4%) compared to respondents with higher levels of educational attainment.² (Figure 6)
- The percentage of having a disability increased as annual household income decreased. Disability was significantly **higher** among adults with an annual household **income of less than \$15,000** (62.4%) compared to respondents with higher annual household incomes.² (Figure 7)
